To assure you install this model easily and correctly, PLEASE READ THESE SIMPLE INSTRUCTIONS BEFORE STARTING THE INSTALLATION. CHECK YOUR INSTALLATION FOR COMPLIANCE WITH PLUMBING, ELECTRICAL AND OTHER APPLICABLE CODES. After installation, leave these instructions inside the fountain for future reference.

IMPORTANT
ALL SERVICE TO BE PERFORMED BY AN AUTHORIZED SERVICE PERSON

IMPORTANT! INSTALLER PLEASE NOTE.

THE GROUNDING OF ELECTRICAL EQUIPMENT SUCH AS TELEPHONE, COMPUTERS, ETC. TO WATER LINES IS A COMMON PROCEDURE. THIS GROUNDING MAY BE IN THE BUILDING OR MAY OCCUR AWAY FROM THE BUILDING. THIS GROUNDING CAN CAUSE ELECTRICAL FEEDBACK INTO A FOUNTAIN, CREATING AN ELECTROLYSIS WHICH CAUSES A METALLIC TASTE OR AN INCREASE IN THE METAL CONTENT OF THE WATER. THIS CONDITION IS AVOIDABLE BY USING THE PROPER MATERIALS AS INDICATED. ANY DRAIN FITTINGS PROVIDED BY THE INSTALLER SHOULD BE MADE OF PLASTIC TO ELECTRICALLY ISOLATE THE FOUNTAIN FROM THE BUILDING PLUMBING SYSTEM.

**FIG. 1**

1/4" O.D. TUBE WATER INLET TO COOLER
3/8" O.D. UNPLATED COPPER TUBE CONNECT COLD WATER SUPPLY
BUILDING WATER INLET

D = 1-1/4" TRAP FURNISHED

NOTE: REINFORCE WALL IN SHADED AREAS
INSTALLATION INSTRUCTIONS

1. Wall should already be framed for the fountain using the positioning dimensions shown in Figures 3, 4, 5, or 6. Shown dimensions pertain to installation location (framing must support up to 300 lbs. weight). These dimensions are required for compliance with ANSI Standard A117.1/ADA requirements.

2. Install rough-in plumbing as shown in Figures 3, 4, 5, or 6. Connecting lines to be unplated copper and thoroughly flushed to remove all foreign matter before connection to fountain. Run the supply water inlet line through the back panel. Install service stop (not provided). Turn on supply water and flush thoroughly.

3. Install back panel.
   EDFPA17C: Place the upper edge of the panel above hanger bracket.
   EDFPA17C W/MOUNTING PLATE: Place the upper edge of the panel above mounting plate on the wall. Slide the panel down until it engages the mounting plate. Be sure back panel is firmly engaged before releasing it.

4. Secure the fountain to the wall.
   MODEL EDFPA17C: Install the fountain to the back panel using (2) bolts and washers (not provided) per each fountain. Next secure the fountain bodies and back panel to the wall using (4) bolts and washers (not provided) per each fountain. Tighten securely.
   MODEL EDFPA17C W/MOUNTING PLATE: Install the fountain to the mounting plate using (2) bolts and washers (provided) per each fountain. Next secure the fountain bodies to the mounting plate with the remaining (4) bolts and washers (provided) per each fountain. Tighten securely.

5. Remove elbow from end of p-trap and attach it to drain tube. Reattach elbow to p-trap and cut waste tube to required length using plumbing hardware and trap as a guide.

6. Make water supply connections from service stop to the 3/8" O.D. unplated copper tube coming out of the strainer. Turn on water supply and check for leaks. Newly installed water supply line should be insulated after leak check is completed. DO NOT SOLDER TUBES INSERTED INTO THE STRAINER AS DAMAGE TO THE O-RINGS MAY RESULT.

7. These products are designed to operate on 20-105 PSIG supply line pressure. If inlet pressure is above 105 PSIG, a pressure regulator must be installed in the supply line. Any damage caused by reason of connecting these products to supply line pressures lower than 20 PSIG or higher than 105 PSIG is not covered by warranty.

8. Check stream height from bubbler. Stream height is factory set at 35 PSI. If supply pressure varies greatly from this, turn adjustment screw on the regulator (Item 7). Clockwise adjustment will raise stream height and counter-clockwise will lower stream height. For best adjustment stream should hit basin approximately 6-1/2" (165mm) from bubbler.

TROUBLE SHOOTING AND MAINTENANCE

1. Orifice Assy: Mineral deposits on orifice can cause water flow to spurt or not regulate. Mineral deposits may be removed from orifice with a small round file not over 1/8" diameter or a small diameter wire. CAUTION: Do not file or cut orifice materials.

2. Stream Regulator: If orifice is free of material deposits, regulate flow according to instruction 8 stated above.

3. Actuation of Quick Connect Water Fittings: Cooler is provided with lead-free connectors which utilize an o-ring water seal. To remove tubing from the fitting, relieve water pressure, push in on the gray collar while pulling on the tubing (See Figure 1). To insert tubing, push tube straight into the fitting until it reaches a positive stop, approximately 3/4".
NOTE: WHEN INSTALLING REPLACEMENT BUBBLER AND PEDESTAL, TIGHTEN NUT (ITEM 19) ONLY TO HOLD PARTS SNUG IN POSITION. DO NOT OVER TIGHTEN.

Installing back panel: When installing back panel without mounting plate accessory, attach (4) channel braces as shown in Fig. 9. Remove the protective backing from the tape installed on the brace. Line up the corresponding holes in the brace and back panel and press firmly in place.
