NOTICE: This water cooler must be connected to the water supply using a dielectric coupling.

NOTE: It is important to insure proper ventilation. Allow a minimum clearance of 12 inches (305 mm) in front and 3 inches (76mm) in the rear of the unit. If unit is to be installed in an enclosure, allow the following clearances around unit - 1 inch (25mm) each side, 3 inches (76mm) in the rear, 3 inches (76mm) above wall.

This chiller has been designed for use with potable water and includes an o-ring seal on the drain plug. The fitting should be replaced if the unit is to be used with more aggressive fluids.

For use with photo processing applications, adjust cold control to warmer settings.

C = 3/8" O.D. TUBE TANK DRAIN
## ERW20-1C  ERW20-2D

### INSTALLATION
1. Potable water inlet and outlet are 3/8" (9 mm) O.D. tube located on top of unit. Water cooled condenser inlet and outlet are 3/8" (9 mm) O.D. tube located on right front of unit. Installer to provide air gap at condenser water outlet to comply with local plumbing specifications. Contractor to supply connections as required.
2. Connecting lines to be of copper, thoroughly flushed to remove all foreign matter before being connected to cooler. If flushing does not remove all particles, a water strainer should be installed in supply line.
3. Connect cooler to building supply line with a shut-off valve and install a union connection between the valve and cooler.
4. Electrical: Make sure power supply is identical in voltage, cycle, and phase to that specified on cooler serial plate. Never wire compressor directly to the power supply.

### START-UP
1. Open supply line valve.
2. Purge air from all water lines by operating bubbler valve of fountain.
3. Connect to electrical power.

### TROUBLE SHOOTING & MAINTENANCE
**Temperature Control:** Factory set for 50°F water under normal conditions. To adjust water temperature, turn screw on Item No. 14 clockwise for colder, counter clockwise for warmer.

**Ventilation:** Cabinet louvers should be periodically cleaned with brush, air hose or vacuum cleaner. Excess dirt or poor ventilation can cause no cold water and compressor cycling on the compressor overload protector.

**Lubrication:** Motors are lifetime lubricated.

*Includes relay & overload. If under warranty, replace with same compressor used in original assembly.

**NOTE:** All correspondence pertaining to any of the above water cooler or orders for repair parts MUST include model number and serial number of cooler, name and part number of replacement part.
